

gear pump catalogue

As the most commonly used power component in hydraulic systems, gear pumps hold a significant position in industrial applications due to their simple structure, compact size, and reliable operation. Our products utilize high-strength alloy gears and precision machining processes to ensure stable and dependable performance under various operating conditions.

1. Product Series and Features

Our gear pump lineup encompasses multiple series, including standard, high-pressure, and low-noise variants. Standard gear pumps suit routine applications with excellent cost-effectiveness; high-pressure models feature specialized designs to withstand elevated operating pressures; while low-noise versions significantly reduce operational noise through optimized gear parameters and improved internal flow paths.

2. Extensive Application Fields

Gear pumps find broad application across engineering machinery, mining equipment, agricultural machinery, and industrial hydraulic systems. Whether for mobile equipment like excavators and loaders or stationary machinery such as machine tools and production lines, our product catalog offers tailored solutions. For specialized operational requirements, we provide customization services to ensure perfect compatibility with your equipment specifications.

3. Professional Selection Guidance

Multiple factors must be considered during product selection, including working pressure, flow requirements, medium characteristics, and installation space. Our technical team provides expert advice to help you choose the most suitable model. Proper selection not only ensures system performance but also extends equipment lifespan and reduces maintenance costs.

4. Comprehensive Service Support

With a dedicated R&D team and advanced production facilities, we guarantee consistent product quality and reliability. From product selection and installation to routine maintenance and troubleshooting, we deliver prompt technical assistance. Our robust after-sales service system ensures your complete peace of mind.
